

## PRESS RELEASE

## NOTA DE PRENSA

### ElevenPaths, a Telefónica company, and Check Point Software Technologies, Provide Joint Mobile Protection Services Globally

- Joint offering protects iOS® and Android® smartphones and tablets used in businesses of any size from the cyberthreats that proliferate the worldwide mobile ecosystem.

**MADRID, Spain and SAN CARLOS, Calif. – April 22, 2016** – [ElevenPaths](#), a Telefónica company specializing in development of innovative security solutions, and [Check Point Software Technologies, Ltd.](#) (NASDAQ: CHKP) today announced, will be a provider of Check Point mobile security technologies for Telefónica corporate customers worldwide.

The agreement between ElevenPaths and Check Point provides Telefónica customers with a suite of mobile security services including Check Point Mobile Threat Prevention and complementary security products developed by ElevenPaths. This new offering will be part of the corporate mobility services Telefónica provides globally today, offering:

- Protection against the three main vectors of mobile attacks including malicious applications, network attacks and attacks to devices' operating systems.
- Visibility and intelligence into the threat landscape of an organization's entire mobile deployment.
- Simple and transparent management of enterprise mobile security, while ensuring privacy.

*"The Telefónica mobile security and mobility management solution facilitates day-to-day in business communications, guaranteeing productivity and protecting employee devices at all times,"* said **Pedro Pablo Pérez**, vice president of products and services, ElevenPaths. *"This agreement provides our customers with unparalleled mobile security with a joint product that combines Check Point Mobile Threat Prevention with [Tacyt](#), a cyber intelligence mobile threat tool developed by ElevenPaths."*

Check Point researchers continue to see a dramatic escalation in the number and sophistication of targeted attacks on mobile devices worldwide. Attacks like these can make business use of smartphones and tablets a significant risk to the security of sensitive enterprise data accessed on mobile devices.

*"We believe mobile devices are the weakest link in corporate security today, leaving businesses susceptible to data leakage and network attacks,"* said **Amnon Bar-Lev, president, Check Point**. *"This agreement is a key part of protecting today's businesses, and we're looking forward to working with Telefónica and Eleven Paths to protect businesses around the world from these threats."*

#### Availability

With this offering, Check Point and ElevenPaths will deliver cutting-edge security for Telefonica customers through integration with ElevenPaths technology, which make it possible for security analysts to identify [behavioral patterns displayed by criminal organizations](#).

## About Telefónica

Telefónica is one of the largest telecommunications companies in the world by market capitalization and number of customers with a comprehensive offering and quality of connectivity that is delivered over world class fixed, mobile and broadband networks. As a growing company it prides itself on providing a differential experience based both on its corporate values and a public position that defends customer interests. The company has a significant presence in 21 countries and over 322 million accesses around the world. Telefónica has a strong presence in Spain, Europe and Latin America, where the company focuses an important part of its growth strategy. Telefónica is a 100% listed company, with more than 1.5 million direct shareholders. Its share capital currently comprises 4,975,199,197 ordinary shares traded on the Spanish Stock Market and on those in London, New York, Lima, and Buenos Aires.

## About ElevenPaths

At ElevenPaths we believe in the idea of challenging the current state of security, an attribute that must always be present in technology. We're always redefining the relationship between security and people, with the aim of creating innovative security products which can transform the concept of security, thus keeping us one step ahead of attackers, who are increasingly present in our digital life.
