PRESS RELEASE

ELEVENPATHS ANNOUNCES ITS NEW STRATEGIC ALLIANCES DURING ITS III SECURITY DAY

- **The new alliance with Fortinet, and the new integration of ElevenPaths products with Check Point and Spamina solutions in order to evolve their technologies, were presented at the III Security Day.**

Madrid, May 26, 2016. – The [Security Day](#), celebrated today under the logo *Security Evolution*, is the place where [ElevenPaths](#), Telefónica's cybersecurity subsidiary, each year presents its new technological integrations hand-in-hand with its experts and partners. In the last three years the Company has consolidated itself as a Cybersecurity and ICT reference at a national level.

During this session, [Chema Alonso, Chairman of ElevenPaths and Chief Data Officer of Telefónica](#), presented the new alliance signed with Fortinet, for the integration of the [Faast](#) tool with WAF systems thus enabling the hot patching of vulnerabilities, and showed the joint functioning of the RSA and Palo Alto Networks technologies with the [SandaS](#) platform for response automation in security incidents, for the first time. Additionally, fruit of our collaboration with the Industrial Cybersecurity Center (CCI for its Spanish original), [SandaS GRC](#) now offers tools to satisfy compliance of the latest security standards in the control of industrial systems and SCADA.

ElevenPaths referred to its latest [agreement with Check Point](#) with which it offers state of the art mobile security thanks to the integration of [Tacyt](#), cyberintelligence tool against mobile threats, with the Mobile Threat Protection solution, and the new [integration of Latch with the Spamina Clean Email platform](#), thanks to which users of this platform will receive an extra layer of security in the management of their digital identities.

Telefónica's Cybersecurity brand has expanded its portfolio of preventive solutions against the leak of sensitive information in digital files, with solutions for [Exchange Server](#) and [Office 365](#). It also presented its security auditing system for the Internet of Things, [VAMPS powered by Faast](#) for IoT.
